These recommendations are not intended to replace the specific product labels; the pesticide label is the legal document on pesticide use. Read the label carefully, as they change often and follow all instructions closely. Some products listed in this bulletin may be dropped by the manufacturer or distributor after the publication of this bulletin. The use of a pesticide in a manner not consistent with the label can lead to the injury of crops, humans, animals, and the environment. The use of a pesticide inconsistent with the label directions can also lead to civil or criminal fines and/or condemnation of the crop. Pesticides are good management tools for the control of pests on crops, but only when they are used in a safe, effective and prudent manner according to the label.

Supported by funding from the Western Michigan Greenhouse Association and the Metropolitan Detroit Flower Growers Association.

1See product label for ‘other’ crops included in the crop group. 2Alphanumeric code assigned by the Fungicide Resistance Action Committee based on the mode of action of the active ingredient. 3Disease abbreviations: B=bacterial blight/rot. D=downy mildew. L=leaf spot/blight (see product label for specific leaf diseases) including Alternaria, anthracnose, Botrytis, Cercospora. P=powdery mildew. Ph=Phytophthora foliar/root. Py=Pythium. R=Rhizoctonia. S=Sclerotinia.
